General data

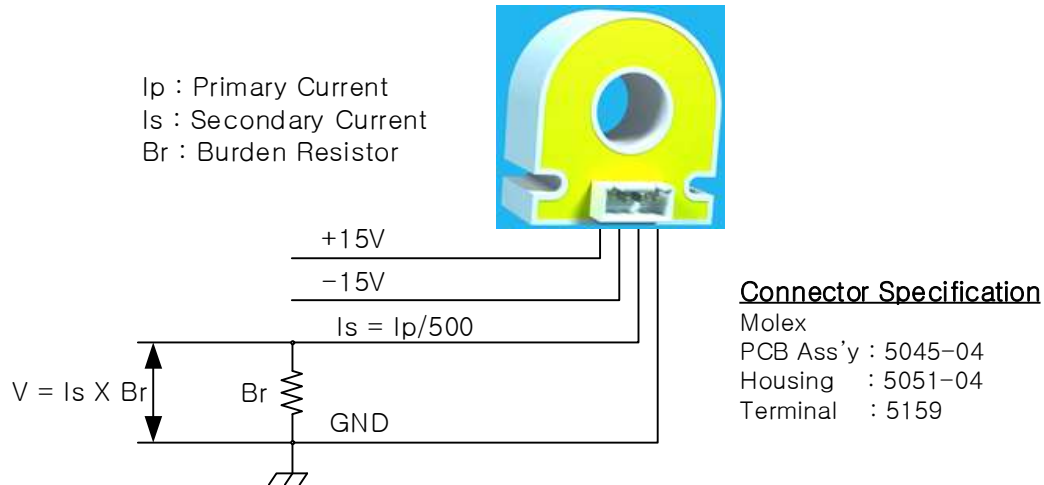

- Plastic case and insulating resin are self-extinguishing.
- Fixing holes in the case molding for two positions at right angles
- Direction of the current: A primary current flowing in the direction of the arrow results in a positive secondary output current from terminal C_{OUT} .

Installation

* The positive direction of the current from the front to the rear of the head (the front of the contactor).

$$(\text{Secondary_Resistance} + \text{Measuring_Resistance}) \times \text{Max_Secondary_Current} + 3V = 15V$$

$$\text{Measuring_Resistance} = (15 - 3) / \text{Max_Secondary_Current} - \text{Secondary_Resistance}$$

$$\text{Therefore, Measuring_Resistance} = 12 / (20/500) - 45 = 555 \, \Omega$$

Caution

Be careful not to operate under 1Ω burden resistor. The current sensor is damaged.
