

MS33W Rack

The MS33W articulated desktop stand holds the Dino-lite with a flexible gooseneck arm that can be bent and twisted into many positions. An additional feature of the MS33W is that there is a fine adjustment knob near the base for small adjustments. Using the knob on the stand, you can focus the Dino-Lite for situations where it maybe too hard to move the adjustment dial on the microscope itself.

The Dino-Lite handheld digital microscopes offer a few stylish yet affordable choices of stands for the Dino-Lite handheld digital microscopes. These convenient and versatile stands are compatible with all Dino-Lite handheld microscopes, which provide the user with hands free and stable operation of the scope.
